

Softerra Adaxes

Enterprise Directory Solution

PRODUCT PROFILE

Introducing Adaxes

Adaxes is a management and automation solution that provides enhanced administration experience to Active Directory, Exchange and Office 365 environments and enables safe delegation of tasks to users via a modern intuitive Web Interface.

Key features

01 Active Directory Management

Adaxes features a rule-based platform for Active Directory, Exchange and Office 365 automation, provides an enhanced web-based management environment, gives you a role-based access control model for delegating privileges, allows enforcing corporate data standards and much more.

02 Automated Provisioning

Adaxes provides rule-based automation which allows streamlining all user lifecycle management procedures, including user onboarding, account updates and offboarding in Active Directory and other connected systems, such as Exchange, Office 365 and Skype for Business.

03 Role-Based Access Control

Adaxes Role-Based Access Control model makes following the least privilege principle extremely easy. It also gives you centralized control over permissions, so you can delegate, manage and revoke them timely and efficiently.

04 Approval-Based Workflow

Adaxes lets you add approval steps to practically any operation in your Active Directory environment. Such approach allows delegating more responsibilities to lower level staff without losing control or adding any security risks.

05 Web Interface for Active Directory

Adaxes Web Interface allows managing Active Directory, Exchange and Office 365 from any device via a standard web browser. It is fully customizable, so everyone always gets access to the exact views, forms and operations they need – no more, no less.

06 Single Interface for AD, Exchange and Office 365

With Adaxes Web Interface all Active Directory, Exchange and Office 365 tasks are combined into a single place. It provides a simple and elegant management experience, eliminating the need for users to learn multiple tools and switch between them in day-to-day routines.

07 Password Self-Service

Adaxes Password Self-Service allows users to reset forgotten passwords and unlock accounts by themselves after they verify their identity by providing an SMS code and /or answering security questions. It also works offsite and offline, covering users who forget their password while working from home or on business trips.

08 Exchange Management and Automation

Adaxes automates creation and management of Exchange mailboxes both on-premises and in Office 365. Any other Exchange-related tasks that require human interaction can be executed via Adaxes Web Interface, eliminating the need to use multiple tools for Active Directory and Exchange.

09 Office 365 Management and Automation

Adaxes allows you to automate the process of assigning and revoking of Office 365 licenses using condition-based rules. It also enables you to manually configure Exchange Online mailboxes and manage O365 licenses via the same Web Interface you use for Active Directory tasks.

10 Active Directory Reports

Adaxes provides detailed reports on your Active Directory environment. In addition to the 200+ built-in ones Adaxes gives you a powerful platform to create your own custom reports of any complexity. It supports centralized scheduling and also allows users to schedule the reports of their choice for themselves.

What you get with Adaxes

Increased Security

Active Directory security is significantly increased due to the approval-based workflow, role-based security administration model and automated user provisioning and deprovisioning.

Efficient Auditing and Monitoring

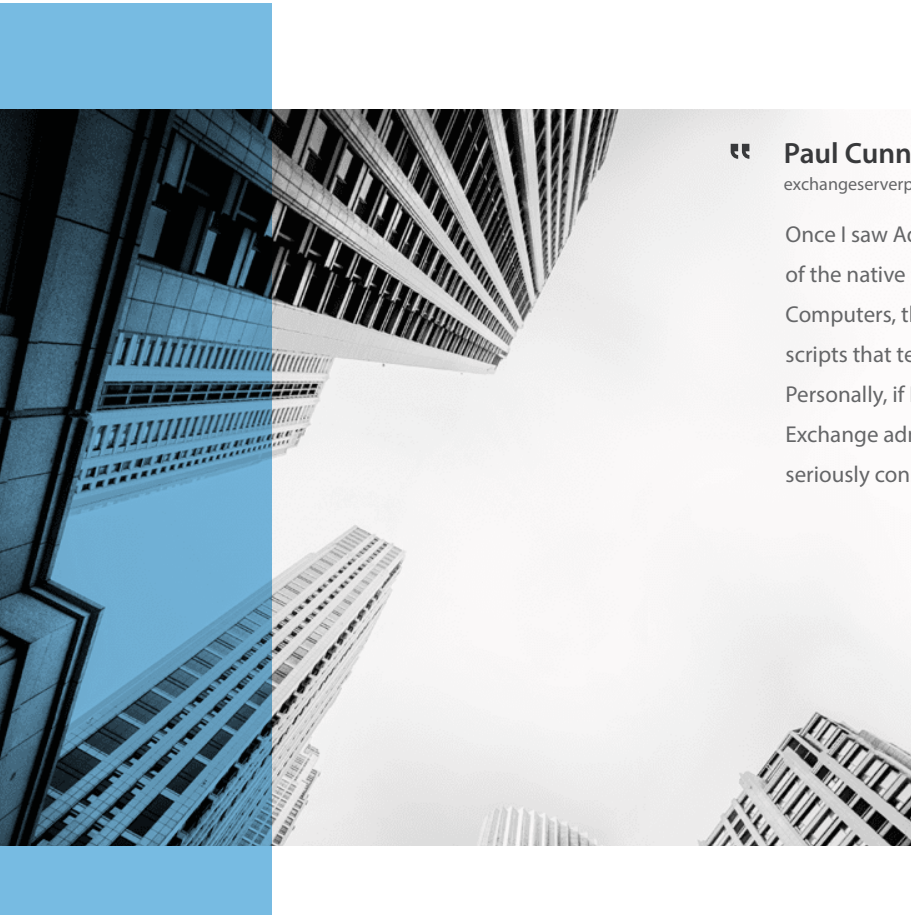

Comprehensive tracking and reporting enables advanced analysis and monitoring of the enterprise resources making your Active Directory environment a more regulated and elaborated place.

Reduced Workload

Automated day-to-day routines, streamlined user lifecycle management, self-service portal, Web Interface — all that can massively reduce the workload on your IT staff.

Standardized AD Environment

Adaxes allows you to enforce corporate standards on your Active Directory data, minimizing possible human factor mistakes and making the management process cleaner and easier

“ Paul Cunningham

exchangeserverpro.com

Once I saw Adaxes in action I realized it would very easily replace many of the native management tools that IT admins use, such as AD Users & Computers, the Exchange Admin Center, and the collection of custom scripts that tend to build up over time.

Personally, if I was implementing automation for Active Directory and Exchange administration by an IT operations team today, I would seriously consider building it on Adaxes.

More about Adaxes

There are many more great [features](#) that come with Adaxes. You can try it yourself with a [free 30-day trial](#) that comes with no limitations on user count or functionality and is available for download at adaxes.com.
