

# Softerra Adaxes

Enterprise Directory Solution

PRODUCT PROFILE

# Introducing Adaxes

Adaxes is a management and automation solution that provides enhanced administration experience to Active Directory, Exchange, and Microsoft 365 environments, and enables safe delegation of tasks to users via a modern intuitive Web Interface.

## Key features

### 1 Active Directory Management

Adaxes features a rule-based platform for Active Directory, Exchange, and Microsoft 365 automation, provides an enhanced web-based management environment, gives you a role-based access control model for delegating privileges, adds security with approval-based workflow, allows enforcing corporate data standards, and much more.

### 3 Role-Based Delegation

Adaxes Role-Based Access Control model makes following the least privilege principle extremely easy. It also gives you centralized control over permissions, so you can delegate, manage, and revoke them timely and efficiently.

### 5 Web Interface for Active Directory

Adaxes Web Interface allows managing Active Directory from any device via a standard web browser. It provides a clean and intuitive UI for admins, help desk, and other staff to execute their AD administration tasks, and a self-service portal for regular users. The Web Interface is fully customizable, so everyone always gets access to the exact views, forms, and operations they need – no more, no less.

### 7 Self-Password Reset

Adaxes Password Self-Service allows users to reset forgotten passwords and unlock accounts by themselves after they verify their identity by answering security questions and/or providing a code received via SMS, email or a mobile app (e.g. Google Authenticator). It also works offsite and offline, covering users who forget their password while working from home or on business trips.

### 9 Microsoft 365 Management and Automation

Adaxes allows you to automate the process of assigning and revoking of Microsoft 365 licenses using condition-based rules. It also enables you to manually configure Exchange Online mailboxes and manage M365 licenses via the same Web Interface you use for Active Directory tasks.

### 2 Automated Provisioning

With Adaxes, all user lifecycle management procedures can be fully automated, including provisioning, re-provisioning, and deprovisioning in Active Directory and connected systems, such as Exchange, Microsoft 365, and Skype for Business.

### 4 Approval-Based Workflow

Adaxes lets you add approval steps to practically any operation in your Active Directory environment. Such approach allows delegating more responsibilities to lower level staff without losing control or adding any security risks.

### 6 Single Interface for AD, Exchange and Microsoft 365

With Adaxes Web Interface, all Active Directory, Exchange, and Microsoft 365 tasks are combined into a single place. It provides a simple and elegant management experience, eliminating the need for users to learn multiple tools and switch between them in day-to-day routines.

### 8 Exchange Management and Automation

Adaxes automates creation and management of Exchange mailboxes both on-premises and in Microsoft 365. Any other Exchange-related tasks that require human interaction can be executed via Adaxes Web Interface, eliminating the need to use multiple tools for Active Directory and Exchange.

### 10 Active Directory Reports

Adaxes provides detailed reports on your Active Directory environment. In addition to the 200+ built-in ones, Adaxes gives you a powerful platform to create your own custom reports of any complexity. It supports centralized scheduling and also allows users to schedule the reports of their choice for themselves.

# What you get with Adaxes

## Increased Security

Active Directory security is significantly increased due to the approval-based workflow, role-based security administration model and automated user provisioning and deprovisioning.

## Efficient Auditing and Monitoring

Comprehensive tracking and reporting enables advanced analysis and monitoring of the enterprise resources making your Active Directory environment a more regulated and elaborated place.

## Reduced Workload

Automated day-to-day routines, streamlined user lifecycle management, self-service portal, Web Interface — all that can massively reduce the workload on your IT staff.

## Standardized AD Environment

Adaxes allows you to enforce corporate standards on your Active Directory data, minimizing possible human factor mistakes and making the management process cleaner and easier

### “ Paul Cunningham

exchangeserverpro.com

Once I saw Adaxes in action I realized it would very easily replace many of the native management tools that IT admins use, such as AD Users & Computers, the Exchange Admin Center, and the collection of custom scripts that tend to build up over time.

Personally, if I was implementing automation for Active Directory and Exchange administration by an IT operations team today, I would seriously consider building it on Adaxes.

## More about Adaxes

There are many more great [features](#) that come with Adaxes. You can try it yourself with a [free 30-day trial](#) that comes with no limitations on user count or functionality and is available for download at [adaxes.com](http://adaxes.com).
